Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

In the amendment, applicant canceled claims 1-47, and retained previously allowed claims 48-50 (last office action 5/5/2004), for the subject matter, for a mobile station for use in a wireless communication system comprising a processor that determines a reconnection parameter when a reconnection attempt is carried out; a transceiver that transmits a connection request along with the reconnection parameter, wherein the reconnection parameter has a reason for the reconnection attempt and a number of the reconnection attempt, the processor determines whether the reason is a first reason or a second reason, and the processor determines a first value for the number of reconnection attempt when the reason is the first reason and determines a second value for the number of reconnection attempt when the reason is the second reason, wherein the first value is the number of the reconnection attempt attributable to the first reason and the second value is the number of the reconnection attempt attributable to the second reason, as shown in independent claim 48. The dependent claims are also allowable due to their dependency upon the independent claims. The closest patent to Spear (US 4,811,380) teaches a radiotelephone comprises a first means for determining the active call which has been lost. The radiotelephone indicates to system of the request for reconnection of the lost call (col. 9, line 46 to col. 10, line 8), having signal strength related parameter monitoring for identifying the reason of the lost call or the reason for failure of connection (col. 5, lines 50-65), the transmitting of a special coded message from radiotelephone to a base station for request for reconnection (col. 6, lines 34-56). Spear fails to teach the processor for determining of whether the reason is a first reason or a second

reason, the first value and the second value for the number of reconnection attempts for the first or the second reason respectively, the first value, the second value is the number of reconnection attempt attributable to the respective, first reason, or the second reason.

Other prior arts in below has been considered, but they fail to teach the above claimed features.

Rappaport-'373 B1 teaches the reactivating a call session for the request received from a wireless terminal, having at least one attribute in the request corresponding to a service level, session type, mobile platform mobility, priority of the call, for the reactivating a call session (col. 37, line 64 to col. 38, line 9), having the maximum number of reconnection attempts (col. 6, line 64 to col. 7, line 14). Rappaport fails to teach the processor for determining of whether the reason is a first reason or a second reason, the first value and the second value for the number of reconnection attempts for the first or the second reason respectively; the first value, the second value is the number of reconnection attempt attributable to the respective, first reason, or the second reason.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
